	9, 650, and 659 are not included in 1,000 r	n denominator since these	alternatives do not affe

NMFS reporting areas 649, 650, and 659 are not included in 1,000 m denominator since these alternatives do not affect these areas.

² Although Alternative 5B appears to close approximately 78 percent of the fishable area, that is an artifact of the way the areas were defined. Observer data were used to create open areas and do not affect the fishery as much as the area calculations make it appear.

calculations make it appear.

Includes the overlap with SSL protection measures and other no trawl areas. All EFH alternatives were cut at 1,000 m "fishable area."

Table 3.2-1. Summary of Benefits and Costs for Alternative 1

	Alternative 1
Benefit or Cost Category	Status Quo
EFH Passive Use Value	No additional protection measures beyond those
	currently in place for EFH
EFH Use Values	Continued commercial fishery exploitation in EFH areas.
Revenue At Risk	No revenues at risk for EFH protection measures
Product Quality	No change from current management impacts on product quality
Operating Cost	Operating costs as currently affected by fishery management measures
Safety	No change in safety costs from current condition
Impacts on Related Fisheries	No additional impacts on related fisheries
Costs to Consumers	No additional costs to consumers
Management and Enforcement	No additional management or enforcement costs
Impacts on Dependent Communities	No additional impacts on dependent communities

Table 3.3-1. Summary of Benefits and Costs for Alternative 2

BENEFIT OR COST CATEGORY	ALTERNATIVE 1 STATUS QUO	ALTERNATIVE 2 GOA NPT SLOPE ROCKFISH 11 SELECTED CLOSURE AREAS
EFH Passive Use Value	No additional protection measures beyond those currently in place for EFH	Protects 10,228 sq. km of seabed from NPT targeting slope rockfish complex.
EFH Use Values	Continued commercial fishery exploitation in EFH areas.	It is not known whether protection of EFH under this alternative would result in sustained or increased production and yield of any FMP species. The other use values of EFH under this alternative are unknown.
Revenue At Risk	No revenues at risk for EFH protection measures	EFH protection measures place \$900,000 or 9.6% of status quo gross revenue at risk in 2001, mainly in the catcher processor fleet in the CG and WG. Some or all of the revenue at risk may be mitigated in adjacent open areas using NPT gear.
Product Quality	No change from current management impacts on product quality	May have minimal impact on product quality since nearby open areas are adjacent to closed areas.
Operating Cost	Operating costs as currently impacted by fishery management measures	May have minimal impact on operating costs since nearby open areas are adjacent to closed areas.
Safety	No change in safety costs from current condition	May have some impact on safety costs since nearby open areas are adjacent to closed areas.
Impacts on Related Fisheries	No additional impacts on related fisheries	May have minimal impact on related fisheries since effort may likely be redeployed into adjacent areas concurrently fished by NPT.
Costs to Consumers	No additional costs to consumers	May have minimal cost to consumers since gross revenue at risk may be mitigated and additional operational costs may be low.
Management and Enforcement	No additional management or enforcement costs	Catcher vessel and catcher processor vessels using NPT gear and targeting slope rockfish may need VMS or 100% observer coverage. Additional management and research costs may occur.
Impacts on Dependent Communities	No additional impacts on dependent communities	Some adverse impacts may accrue to Washington based catcher-processors, but overall impacts to dependent communities are expected to be insignificant.

Table 3.4-1. Summary of Benefits and Costs for Alternative 3

Benefit or Cost Category	Alternative 1 - Status Quo	Alternative 3 - GOA NPT Slope Rockfish Slope from 200 to 1000 m
EFH Passive Use Value	in place for EFH	Protects 29,059 sq. km of seabed from NPT targeting slope rockfish complex.
EFH Use Values	Continued commercial fishery exploitation in EFH areas.	It is not known whether protection of EFH under this alternative would result in sustained or increased production and yield of any FMP species. The other use values of EFH under this alternative are unknown.
Revenue At Risk	No revenues at risk for EFH protection measures	EFH protection measures place \$2.65 million or 28.3% of \$9.36 million in status quo gross revenue at risk in 2001. Both the CV and CP fleet in the CG and the CP fleet in the WG are impacted. Some or all of the revenue at risk may
		be mitigated in adjacent open areas (shallower than 200 m depth) and with PTR gear. Some revenue at risk may transfer from smaller CV to larger CV and CP fleet components.
Product Quality	No change from current management impacts on product quality	May have some impact on product quality in CV fleet due to longer running time to open areas.
Operating Cost	Operating costs as currently impacted by fishery management measures	There may be an increase in operating costs in both CV and CP fleets targeting slope RF in the CG and the CP fleet in the WG.
Safety	No change in safety costs from current condition	Some impact on safety costs due to increased effort to mitigate revenue at risk in the CG and WG.
Impacts on Related Fisheries	No additional impacts on related fisheries	Additional NPT effort targeting Slope RF in waters shallower than 200 m may increase gear conflicts with HAL and Pot fisheries.
Costs to Consumers	No additional costs to consumers	May have minimal increased costs to consumers since some or all of the gross revenue at risk may be mitigated and some increase in operational costs may be reflected in an increased price of products to consumers.
Management and Enforcement	No additional management or enforcement costs	Catcher vessel and catcher processor vessels using NPT gear and targeting slope rockfish may require VMS or 100% observer coverage. There may be additional management and research costs.
Impacts on Dependent Communities	No additional impacts on dependent communities	Due to GOA fishery effects, smaller Kodiak owned CVs may lose some rockfish share to larger CVs and C/Ps, and Kodiak and Washington owned C/Ps as a sector may be adversely affected, but overall impacts to dependent communities are expected to be insignificant.

1/ Catcher Vessels Are	Ex-vessel Values	and Catcher Proce	ssors Are First Who	olesale Value (Millio	ons of Dollars, Base	ed on 2001)			

Appendix C Preliminary Final EFH EIS – January 2005

Table 3.5-1. Summary of Benefits and Costs for Alternative 4

Benefit or Cost Category	Alternative 1 - Status Quo	Alternative 4 - GOA NPT Slope Rockfish 11 Designated Areas BS NPT 25% Rotating Closures AI NPT Designated Areas
EFH Passive Use Value	No additional protection	Protects a total of 81,097 sq. km of EFH, including 22, 883 sq.
	measures beyond those	km in the AI, 47,986 sq. km in the BS, and 10,228 sq. km in
	currently in place for EFH	the GOA. Restricts NPT for all species in designated areas of
		the BS and AI and NPT for slope RF in designated areas of the
		GOA.
EFH Use Values	Continued commercial	It is not known whether protection of EFH under this
	fishery exploitation in EFH	alternative would result in sustained or increased production
	areas.	and yield of any FMP species. The other use values of EFH
		under this alternative are unknown.
Revenue At Risk	No revenues at risk for EFH	EFH protection measures place \$3.53 to \$6.11 million or 2.2%
	protection measures	to 3.8% of the \$156.86 to \$162.79 million status quo gross
		revenue at risk (value dependent upon BS rotational area).
		GOA revenue at risk is \$0.90 million or 9.6% of slope rockfish
		NPT status quo of \$9.4 million. BS revenue at risk is \$1.8 to
		\$4.4 million or 2.0% to 4.5% of \$90.92 to \$96.74 million status
		quo. AI revenue at risk is \$0.82 million or 1.4% of \$56.70
		million status quo. Main revenue at risk impact is for CPs at
		\$0.86 million or 12.3% status quo at risk in the GOA, \$1.82
		million to \$4.40 million or 2.0% to 4.8% at risk in BS, and
		\$0.8 or 1.5% at risk in the AI. Main fisheries affected are
		NPT for slope rockfish in the GOA, flathead sole in BS and
Product Quality	No change from current	rockfish in the AI. May have some impact on product quality in CV fleet due to
1 roduct Quanty	management impacts on	longer running time to open areas.
	product quality	longer running time to open areas.
Operating Cost	Operating costs as currently	May be likely to increase operating costs in the CP and CV
	impacted by fishery	fleets in all areas.
	management measures	
		· ·
Safety	No change in safety costs	May be likely to affect safety costs due to increased effort to
	from current condition	mitigate revenue at risk.
Impacts on Related Fisheries	No additional impacts on	Redeployment of NPT gear fishing effort in the BS and AI may
	related fisheries	impact fisheries using HAP and POT.
Costs to Consumers	No additional costs to	May have minimal increased costs to consumers since some or
	consumers	all of the gross revenue at risk may be mitigated and some
		increase in operational costs may increase the price of
		products.
Management and Enforcement	No additional management	Catcher vessel and catcher processor vessels using NPT gear
	or enforcement costs	and targeting slope rockfish in the GOA and all species in the
		BSAI may need VMS or 100% observer coverage. There may
		be additional management and research costs.
Impacts on Dependent Communities		GOA related community impacts would be similar to Alt 3.
	dependent communities	BSAI fishery related community impacts would be negligible.
		Overall, impacts to dependent communities are expected to be
		insignificant.

1/ Catcher Vessels Are Ex-vessel Values and Catcher-Processors Are First Wholesale Value (Millions of Dollars, Based on 2001).

Table 3.6-1. Summary of Benefits and Costs for Alternative 5A

		ALTERNATIVE 5A
		GOA NPT SLOPE ROCKFISH
•		SLOPE FROM 200 TO 1000 M
		GOA NPT ALL SPECIES 10 AREAS
	ALTERNATIVE 1	BS NPT ALL SPECIES 33% ROTATION
BENEFIT OR COST CATEGORY	STATUS QUO	AI NPT DESIGNATED AREAS
DETICATION OF CATEGORY	No additional protection	Protects a total of 128,114 sq. km of EFH, including 32, 235 sq. km
DTT D	measures beyond those	in the AI, 63,975 sq. km in the BS, and 31,904 sq. km in the GOA.
EFH Passive Use Value	currently in place for EFH	Restricts NPT for all species in designated areas of the BS and AI
		and NPT for slope RF along the slope (200 to 1,000 m) and for all
		species in designated areas of the GOA.
	Continued commercial	It is not known whether protection of EFH under this alternative
EFILUS Volum	fishery exploitation in EFH	will result in sustained or increased production and yield of any
EFH Use Values	areas.	FMP species. The other use values of EFH under this alternative
		are unknown.
	No revenues at risk for EFH	EFH protection measures place \$7.92 million to \$10.90 million or
		4.4% to 6.0% of the \$180.66 to \$181.30 million status quo gross
	protection measures	
		revenue at risk (value dependent upon BS rotational area). GOA
		revenue at risk is \$3.60 million or 13.0% of the status quo of
		\$27.69 million. BS revenue at risk is \$2.63 to \$5.61 million or
		2.7% to 5.8% of \$96.27 to \$96.91 million of status quo revenue.
		Al revenue at risk of \$1.69 million or 3.0% of the \$56.70 million
		status quo revenue. Both the CV and CP fleets have a similar
Revenue At Risk		-
		percent of status quo revenue at risk of 4.6% (CV) and 4.4% to
		6.2% (CP). The CP revenue at risk ranges from \$7.02 million to
		\$10.0 million and the CV fleet revenue at risk is \$0.90 million.
		The CV fleet is affected mainly in the GOA while the CP fleets are
		affected in all three areas. The main fisheries affected are slope
		rockfish and Pacific cod in the GOA, flathead sole and Pacific cod
		in the BS, and rockfish in the Al.
		in the b3, and locklish in the Al.
	No change from current	May have some impact on product quality in CV fleet due to longer
Product Quality	management impacts on	running time to open areas.
Trouder Quanty	product quality	running time to open meas.
	Operating costs as currently	Likelihood of up to a some increase in operating costs in the CV
	impacted by fishery	and CP fleets targeting Atka mackerel, Pacific cod and rockfish in
Operating Cost	management measures	the Al, the CP fleet targeting flathead sole and other flatfish in the
		BS, and the CV and CP fleets targeting rockfish and Pacific cod in
		the GOA.
C-C-4	No change in safety costs	Some impact on safety costs due to increased effort to mitigate
Safety	from current condition	revenue at risk, particularly in the AI.
	No additional impacts on	Redeployment of NPT gear fishing effort may impact fisheries
Impacts on Related Fisheries	related fisheries	using HAP and POT.
	No additional costs to	There may be increased costs to consumers if not all of the gross
Costs to Communication		
Costs to Consumers	consumers	revenue at risk can be mitigated and if increases in operational
		costs and reflected in product prices.
	No additional management	Catcher vessel and catcher processor vessels using NPT gear and
Management and Enforcement	or enforcement costs	targeting slope rockfish in the GOA and all species in the BSAI
Wanagement and Emoreement		may require VMS or 100% observer coverage. There may be
·		additional management and research costs.
	No additional impacts on	Smaller CVs from King Cove, Sand Point, and Kodiak would likely
		experience adverse impacts, and these impacts, especially in
	dependent communities	
	dependent communities	•
	dependent communities	conjunction with potential impacts to shoreside processors in
Impacts on Dependent Communities	dependent communities	conjunction with potential impacts to shoreside processors in smaller WG area communities, may be felt at the community level
Impacts on Dependent Communities	dependent communities	conjunction with potential impacts to shoreside processors in smaller WG area communities, may be felt at the community level in King Cove and Sand Point. Adverse impacts to C/Ps would be

Scallop	N/A	N/A	N/A	N/A			N/A	N/A	N/A

BENEFIT OR COST CATEGORY EFH Non-use Value	ALTERNATIVE 1 STATUS QUO No change	ALTERNATIVE 5B GOA NPT SLOPE ROCKFISH SLOPE FROM 200 TO 1,000 M GOA NPT ALL SPECIES 10 AREAS BS NPT ALL SPECIES 33% ROTATION AI NPT DESIGNATED AREAS BY CPUE AND HABITAT Would protect 160,865 to 172,568 sq. km of EFH—(64,986 to 76,689 sq. km in AI + 63,975 sq. km in BS + 31,904 sq. km in GOA). Would restrict NPT for all species in designated areas of BSAI and NPT for slope RF along the slope (200 to 1,000 m) and for all species in designated areas of GOA. Establishes open and closed areas for NPT fisheries. Under Options 1 and 2, AI NPT fisheries could be further restricted based on coral/sponge bycatch rates and would reduce TACs in some NPT fisheries by weight historically caught in closed areas.
EFH Use Values	Continued commercial fishery exploitation, at present levels, in EFH areas	It is uncertain whether EFH protection under this alternative would result in sustained/increased yield of any FMP species. All other EFH use values under this alternative are unknown.
Revenue At Risk	No attributable EFH revenues at risk	EFH would place \$7.46 million to \$15.93 million (4.1 to 8.8% of the \$179.77 million to \$180.41 million status quo) gross revenue at risk (value dependent upon BS rotational area and AI option chosen). GOA revenue at risk would be \$3.60 million (13.0 of \$27.69 million status quo). BS revenue at risk would be \$2.63 million to \$5.61 million (2.7 to 5.8% of \$96.27 million to \$96.91 million status quo). AI revenue at risk would be \$6.71 million (12.0% of the \$55.81 million status quo revenue) under Option 1, \$2.99 million (5.4% of status quo revenue) under Option 2, and \$1.23 million (2.2% of status quo revenue) under Option 3. BSAI revenue lost to TAC reduction could total \$15.16 million which would be more than the revenue at risk in these areas under Option 1. AI revenue lost to TAC reduction could total \$3.83 million under Option 2. C/P revenue at risk could range from \$6.53 million to \$14.72 million dependent upon BS rotational area and AI option chosen. CV revenue at risk would range from \$0.93 million to \$1.21 million dependent upon BS rotational area and AI option chosen. The CV fleet would be impacted in the GOA and AI, while C/Ps would be impacted in all three areas. The main fisheries affected would be slope rockfish and Pacific cod in GOA; flathead sole
Product Quality	No change	and Pacific cod in BS; and Atka mackerel, Pacific cod, and rockfish in AI. Might have adverse impact on product quality. CV fleet might have increased running time to and from open areas.
Operating Cost	No change	Would have probable increases in CV and C/P operating costs targeting Atka mackerel, Pacific cod, and rockfish in AI, C/Ps targeting flathead sole and other flatfish in BS, CVs and C/Ps targeting rockfish and Pacific cod in GOA. In AI, 100% observer coverage requirement would increase costs for 30% coverage
Safety	No change	Would have potential for some adverse safety impacts due to expected increased effort to mitigate revenue at risk, particularly in AI.
Impacts on Related Fisheries	No additional impacts on related fisheries	Redeployment of NPT effort in the BS and AI may adversely impact fisheries using HAL and POT, through damage, loss, or displacement.
Costs to Consumers	No change	Would have expected adverse impacts on consumers from AI NPT fishery restrictions. Some production would be lost due to TAC reductions under AI Options 1 and 2. Operational cost increases might result in higher consumer prices and/or limited supply. Consumer prices for other fishery products from other EFH impacted areas might increase, as well, if catch at risk were not recovered, or operational cost increases could be passed along to the consumer.
Management and Enforcement	No additional management or enforcement costs	CVs and C/Ps using NPT gear and targeting slope rockfish in the GOA, and all species in the BSAI, might be required to have VMS or 100% observer coverage. In the AI, 100% observer coverage would increase management costs. In the AI, a required research and monitoring program would result in increase costs.
Impacts on Dependent Communities	No additional impacts on dependent communities	GOA and BS fishery related community impacts to King Cove, Sand Point, and Kodiak would be similar to Alternative 5A. Additional Al CV and C/P related impacts would accrue to Kodiak and Washington communities, but would probably be insignificant at the community level. Additional shoreside processing impacts might be seen at Unalaska/Dutch Harbor, but would probably be insignificant.

1/ Catcher vessels are ex-vessel values and catcher-processors are first wholesale value (millions of dollars, based on 2001).

Table 3.8-1. Summary of Benefits and Costs for Alternative 6

BENEFIT OR COST CATEGORY	ALTERNATIVE 1 STATUS QUO	ALTERNATIVE 6 CLOSURE TO ALL BOTTOM TENDING GEAR IN 20% OF FISHABLE WATERS
EFH Non-Use Value	No change	Protects 218,750 sq. km of EFH [20,729 sq. km in Al + 136,031 sq. km in BS + 61,991 sq. km in GOA}. Restricts NPT for all species in designated areas of BSAI. In GOA NPT for slope RF along the slope (200 to 1,000 m) and all species in designated areas are restricted. Prohibits NPT fisheries in Al based on coral/sponge bycatch rates. Reduces TACs in NPT fisheries by weight historically caught in closed areas.
EFH Use Values	Continued commercial fishery exploitation, at present levels, in EFH areas.	It is uncertain whether EFH protection under this alternative will result in sustained/increased yield of any FMP species. All other EFH use values under this alternative are unknown.
Revenue At Risk	No revenues at risk	EFH protection measures place \$237.20 million (18.9% of \$1.26 billion status quo gross revenue) at risk. GOA revenue at risk would be \$46.52 million (22.0% of status quo of \$211.48 million). BS revenue at risk would be \$177.54 million (19.0% of \$934.36 million status quo). Al revenue at risk would be \$13.14 million (11.8% of \$111.30 million status quo). Groundfish fishenes would incur the largest revenue at risk impact at \$163.76 million (16.0% of status quo), followed by halibut at \$38.34 million (34.2% of status quo), crab at \$34.11 million (29.4% of status quo), then scallops at \$0.98 million (29.1% of status quo revenue). In GOA these would be, in order, halibut fishenes at \$2.63 million, and rockfish fishery at \$2.29 million. In BS, the pollock fishery would have revenues at risk of \$104.04 million, crab fishenes \$28.45 million, and P.cod \$23.83 million at risk. In AI, the crab fishery would have \$5.3 million at risk, halibut fishery \$2.69 million, and P. cod \$2.32 million at risk.
Product Quality	No change	Likely some adverse impact on product quality in CV fleet due to longer running time between open areas and shoreside processors.
Operating Cost	No change	Strong likelihood of some increase in operating costs of CVs and C/Ps targeting Atka mackerel, P.cod and rockfish in the Al, C/Ps targeting flathead sole and other flatfish in BS, CVs and C/Ps targeting rockfish and P.cod in GOA. In the Al, 100% observer requirement will increase costs for current 30% coverage vessels.
Safety	No change	There may be an impact on safety costs due to increased effort to mitigate revenue at risk in all areas.
Impacts on Related Fisheries	No change	Redeployment of NPT effort in the BS and AI may adversely impact fisheries using HAL and POT, through damage, loss, or displacement.
Costs to Consumers	No additional costs to consumers	High probability of adverse impacts on consumers. Likely significant loss of aggregate production due to substantial reductions in fishable open areas. Operational cost increases may be prohibative for some operations and/or sectors. Loss of production will resulting in higher consumer prices and/or limited supplies. Potential for loss of market share, with associated welfare losses for U.S. consumers.
Management and Enforcement	No additional management or enforcement costs	Catcher vessel and catcher processor vessels using bottom contact fishing gear for all species may be required to have VMS or 100% observer coverage. Additional management costs may be inferred.
Impacts on Dependent Communities	No additional impacts on dependent communities	Significant dependent community impacts would result from Alt 6. Groundfish CV related community impacts would be largely concentrated in King Cove, Sand Point, Kodiak, and Homer. Halibut CV impacts would be felt in many communities of various sizes throughout the GOA and BSAI regions, but would likely be most adverse in the comparatively small communities of Sand Point and St. George. Crab fleet associated impacts would be most prominent in Kodiak, although some of the smaller community fleets may also feel effects. Seattle CVs would experience the
		greatest level of impact of any community fleet, but effects would be insignificant at the community level. C/P impacts would be largely concentrated in Kodiak and Washington communities. Shoreside processor impacts would be be largely concentrated in Unalaska, St. Paul, and Kodiak, although other communities would be affected. Overall, multi-sector impacts that may be significant at the community level would occur in Kodiak, Sand Point, King Cove, St. George, and St. Paul. Other communities with substantial, but likely less than significant impacts would be Home

Notes

Communities listed are within 5 miles of a portion of the coastline that is within 20 miles of an EFH Alt 6 closure area. (Named places with no residential population are excluded.)

Maximum Available Area within 20 Miles (Existing Conditions) is the square miles of ocean within 20 miles of community, excluding existing SSL closure areas. Caveat: some of the ocean areas within 20 miles of the community as the crow flies may not be accessible to small boats in practical terms (e.g., waters on the opposite side of a narrow peninsula) - this should be taken as a rough measure.

Area Closed Under Alternative 6 is the amount of area within the maximum available area within 20 miles that would be included in an EFH Alt 6 closure area.

Percentage of Maximum Available Area Closed is the percentage resulting from area closed divided by maximum available area.

Table includes communities with and without current commercial fishery participation.

Table 3.9-1. Comparative Summary of Benefits and Costs for Alternatives 1 through 6

Table 3.9-1. Comparat	ive Summary of Benefits and Co	ists for Alternatives 1 t	nrougn 6	· · · · · · · · · · · · · · · · · · ·		·	
BENEFIT OR COST CATEGORY EFH Passive Use Value (ranking assumes positive correlation between sq.km protected and passive use value)	ALTERNATIVE 1 STATUS QUO There would be no change in passive use value (status quo).	ALTERNATIVE 2 GOA NPT SLOPE ROCKFISH 11 AREAS Would protect 10,228 sq. km of seabed from NPT targeting slope rockfish complex. Would be a slight potential increase in passive use value compared to Alternative 1.	seabed from NPT targeting slope rockfish complex. Would be a somewhat larger potential increase in passive use value compared to Alternatives 1 or 2.	(including 22,883 sq. km in AI + 47,986 sq. km in BS + 10,228 sq. km in GOA). Would restrict NPT for all species in designated areas of BSAI and NPT for slope RF in designated areas of GOA. Would be a potential	km in BS + 31,904 sq. km in GOA). Would restrict NPT for all species in designated areas of BSAI, and NPT for slope RF along the slope (200 to 1,000 m) and for all species in designated areas of GOA. Would be a potential increase in passive use value relative to Alternatives 1, 2, 3, or 4.	chosen + 63,975 sq. km in BS + 31,904 sq. km in GOA). Would restrict NPT, all species, in designated areas of BSAI, and NPT for slope RF along the slope (200 to 1,000 m) and for all species in designated areas of GOA. Would prohibit NPT use in AI based on coral/sponge bycatch rates under Options 1 and 2. Would reduce TACs in NPT fisheries by weight historically caught in closed areas under Options 1 and	NPT use in the AI based on coral/sponge bycatch rates. Would reduce TACs in NPT fisheries by weight historically caught in closed areas. Would
Management and Enforcement	Would continue fishery exploitation at present levels in EFH areas. Based upon best available scientific information, existing habitat conservation measures would probably be sufficient to sustain FMP stocks at present abundance levels. Because some information is not well understood (e.g., linkages between fish productivity rates and habitat; recovery rates of some sessile invertebrates) uncertainties would remain.	It is uncertain whether EFH protection under this alternative would result in sustained/increased yield of any FMP species, although EFH provisions in MSA presuppose this outcome. All other EFH use values under this alternative are unknown.	would result in sustained/increased yield of any FMP species, although EFH provisions in MSA presuppose	under this alternative would result in sustained/increased yield of any FMP species, although EFH provisions in MSA presuppose this outcome. All other EFH use values under this alternative are unknown.	under this alternative would result in sustained/increased yield of any FMP species, although EFH provisions in MSA presuppose this outcome. All other EFH use values under this alternative are unknown.	any FMP species, although EFH provisions in MSA presuppose this outcome. All other EFH use values under this alternative are unknown.	It is uncertain whether EFH protection under this alternative would result in sustained/increased yield of any FMP species, although EFH provisions in MSA presuppose this outcome. All other EFH use values under this alternative are unknown.
Revenue At Risk	No EFH attributable revenues would be at risk.	EFH protection measures would place \$900 thousand (9.6% of 2001 status quo gross revenue) at risk, mainly in the CG and WG C/P fleet. Some of these revenues at risk may be mitigated, using NPT, in adjacent open areas.	place \$2.65 million (28.3% of 2001 gross revenues of \$9.36 million) at risk. CV and CP fleets in CG and CP fleet in WG would be adversely impacted. Some of these revenues at risk may be mitigated, using PTR, in adjacent open areas (shallower than 200 m). Some share of revenue at risk may be transferred from small CV	\$4.4 million (2.0 to 4.5% of \$90.92 to \$96.74 million status quo). AI revenue at risk would be \$0.82 million (1.4% of \$56.70 million status quo). Main revenue at risk impact would be GOA C/Ps at \$0.86 million (12.3% of status quo), EBS C/Ps at \$1.82 million to \$4.40 million (2.0 to 4.8%), AI C/Ps \$0.8 (1.5% of status quo). Main	million to \$10.90 million or 4.4 to 6.0% of the \$180.66 to \$181.30 million status quo gross revenue at risk (value dependent upon EBS rotational area). GOA revenue at risk would be \$3.60 million or 13.0% of the status quo of \$27.69 million. EBS revenue at risk would be \$2.63 million to \$5.61 million or 2.7 to 5.8% of \$96.27 to \$96.91 million of status quo revenue. AI revenue at risk would be \$1.69 million or 3.0% of	\$15.93 million or 4.1 to 8.8% of the \$179.77 to \$180.41 million status quo gross revenue at risk (value dependent upon BS rotational area and AI option chosen). GOA revenue at risk would be \$3.60 million or 13.0% of the status quo of \$27.69 million. EBS revenue at risk would be \$2.63 million to \$5.61 million or 2.7 to 5.8% of \$96.27 million to \$96.91 million of status quo revenue. AI revenue at risk would be \$6.71 million or 12.0% of the \$55.81 million status quo revenue under Option 1, \$2.99 million at risk or 5.4% of status quo revenue under Option 2, and \$1.23 million at risk or 2.2% of status quo revenue under Option 3. BSAI revenue lost to TAC reduction could total \$15.16 million or more than the revenue at risk in	million or 18.9% of the \$1.26 billion status quo gross revenue at risk. GOA revenue at risk would be \$46.52 million or 22.0% of the status quo of \$211.48 million. EBS revenue at risk would be \$177.54 million or 19.0% of \$934.36 million of status quo revenue. AI revenue at risk would be \$13.14 million or 11.8% of the \$111.30 million status quo revenue. Groundfish fisheries would have the largest revenue at risk with \$163.76 million or 16.0% of status quo revenue, followed by the halibut fishery with \$38.34 million or 34.2% of status quo revenue, crab fisheries with \$34.11 million or 29.4% of status quo revenue, and the scallop fishery with \$0.98

Table 3.9-1. Comparat	ive Summary of Benefits and Co	osts for Alternatives 1 t	rough 6 (continued)

Revenue At Risk (continued)					The main fisheries affected would be slope rockfish and Pacific cod in the GOA, flathead sole and Pacific cod in the EBS, and rockfish in AI.	while the CP fleets would be impacted in all three areas. The main fisheries affected would be slope rockfish and Pacific cod in the GOA, flathead sole and Pacific cod in the EBS, and Atka mackerel, Pacific	In the EBS, the pollock fishery would have \$104.04 million of revenue at risk, the crab fisheries \$28.45 million, and the Pacific cod fisheries, \$23.83 million of revenue at risk. In the AI, the crab fishery would have \$5.3 million at risk, halibut fishery \$2.69 million and Pacific cod fisheries \$2.32 million at risk.
Product Quality	No change	impact on product	product quality. CV fleet may	May have adverse impact on product quality. CV fleet may have increased running time to and from open areas.	May have adverse impact on product quality. CV fleet may have increased running time to and from open areas.	May have adverse impact on product quality. CV fleet may have increased running time to and from open areas.	May have adverse impact on product quality. CV fleet may have increased running time to and from open areas.
Operating Cost	No change	impact on operating		May be significant increases in operating costs for C/Ps and CVs in all areas.	Would be probable increases in CV and C/I operating costs targeting Atka mackerel, Pacific cod, and rockfish in AI, C/Ps targeting flathead sole and other flatfish in EBS, CVs and C/Ps targeting rockfish and Pacific cod in GOA.	Would be probable increases in CV and C/P operating costs targeting Atka mackerel, Pacific cod, and rockfish in AI, C/Ps targeting flathead sole and other flatfish in EBS, CVs and C/Ps targeting rockfish and Pacific cod in GOA. In AI, 100% observer coverage requirement would increase costs for 30% coverage vessels.	Would be probable increases in CV and C/P operating costs targeting Atka mackerel, Pacific cod, and rockfish in AI, C/Ps targeting flathead sole and other flatfish in EBS, CVs and C/Ps targeting rockfish and Pacific cod in GOA. In AI, 100% observer coverage requirement would increase costs for 30% coverage vessels.
Safety Costs	No change	small adverse impacts	1 *	Would likely be some adverse impacts on safety due to expected increased effort to mitigate revenue at risk.	Would be potential for adverse safety impacts due to expected increased effort to mitigate revenue at risk, particularly in AI.	Would be potential for adverse safety impacts due to expected increased effort to mitigate revenue at risk, particularly in AI.	Would be potential for adverse safety impacts in all FMP management areas due to expected increased effort to mitigate revenue at risk in all areas.
Impacts on Related Fisheries	There would be no impact.	impacts on related fisheries. Displaced effort would likely be	DSR in waters shallower than 200 m may increase gear	Redeployment of NPT effort in the EBS and AI may adversely impact fisheries using HAL and Pot, through damage, loss, or displacement.	Redeployment of NPT effort in the EBS and AI may adversely impact fisheries using HAL and Pot, through damage, loss, or displacement.	Redeployment of NPT effort in the EBS and AI may adversely impact fisheries using HAL and Pot, through damage, loss, or displacement.	Redeployment of NPT effort in the EBS and AI may adversely impact fisheries using HAL and Pot, through damage, loss, or displacement.
Costs to Consumers	There would be no impact.		some or all of the displaced catch may be mitigated. Would be potential increased costs to consumers, reflecting operating cost increases, depending on market factors (e.g., elasticities,	Would be a minimal expected increased costs to consumers, as some or all of the displaced catch may be mitigated. Would be potential increased prices to consumers, reflecting operating cost increases, depending on market factors (e.g., elasticities, availability, and price of substitutes, etc.).	Would be greater risk that displaced catch may not be made up. Would be increased probability of adverse impacts on consumers (e.g., increased prices, reduced supplies, more limited range of product forms, lower quality).	Would be expected adverse impacts on consumers from AI NPT fishery restrictions under AI Alternative 5B, Options 1 and 2. Some production will be foregone and unrecoverable due to TAC reductions under AI Options 1 and 2. Operational cost increases may result in higher consumer prices and/or limited supplies, depending upon market factors (e.g., demand elasticity, price and availability of substitutes, etc.).	consumers. Would likely be significant loss of aggregate production due to substantial reductions in fishable open areas. Operational cost increases may be prohibitive for some operations and/or sectors. Loss of production

Table 3.9-1. Comparative Summary of Benefits and Costs for Alternatives 1 through 6 (continued)

BENEFIT OR COST CATEGORY Management and Enforcement	ALTERNATIVE 2 GOA NPT SLOPE ROCKFISH 11 AREAS CVs and C/Ps using NPT gear and targeting slope rockfish may have to have VMS or 100% observer coverage. Additional management costs may be inferred.	100% observer coverage.	ALTERNATIVE 4 GOA NPT SLOPE ROCKFISH 11 AREAS NPT ALL SPECIES IN AREAS OF BSAI CVs and C/Ps using NPT gear and targeting slope rockfish in the GOA, and all species in the BSAI, may have to have VMS or 100% observer coverage. Additional management costs may be inferred.	slope rockfish in the GOA, and all species in the BSAI, may have to have VMS or 100% observer coverage. Additional management costs may be inferred.	ALTERNATIVE 5B GOA NPT All SPECIES 10 AREAS GOA SLOPE ROCKFISH ENTIRE SLOPE NPT ALL SPECIES IN AREAS OF BSAI AI HABITAT/CPUE BASE CLOSURES CVs and C/Ps using NPT gear and targeting slope rockfish in the GOA, and all species in the BSAI, may have to have VMS or 100% observer coverage. In the AI, 100% observer coverage would increase management costs. In the AI, a required research and monitoring program would result in increase costs.	may have to have VMS or 100% observer coverage. Additional management costs may be inferred.
Impacts on Dependent Communities	C/Ps, but overall impacts to dependent	larger CVs and C/Ps, and	be similar to Alt 3. BSAI fishery related community impacts would be negligible. Overall, impacts to dependent communities would probably be insignificant.	and Kodiak would likely experience adverse impacts, and these impacts, especially in conjunction with potential impacts to shoreside processors in smaller WG area	GOA and BS fishery-related community impacts to King Cove, Sand Point, and Kodiak would be similar to Alternative 5A. Additional AI CV and C/P related impacts would accrue to Kodiak and Washington communities, but would probably be insignificant at the community level. Additional shoreside processing impacts may be seen in Unalaska/Dutch Harbor, but would probably be insignificant.	Significant community impacts may result from Alternative 6. Groundfish CV related community impacts would largely be concentrated in King Cove, Sand Point, Kodiak, and Homer; halibut CV impacts in many communities of various sizes throughout GOA and BSAI, but most likely in the small communities of Sand Point and St. George. Expected crab fleet community impacts would be most prominent in Kodiak, but smaller community fleets may also feel effects. Seattle CVs would incur the greatest impact, but effects would be insignificant at the community level. C/P impacts would be concentrated largely in Kodiak and Washington communities. Shoreside processor impacts would be concentrated largely in Unalaska, St. Paul, and Kodiak, although other communities would be affected. Significant multi-sector impacts at the community level would occur in Kodiak, Sand Point, King Cove, St. George, and St. Paul. Many communities relatively more dependent on small boat fleets would incur losses due to closures of adjacent fishing areas.
